

Crimp-n-Shrink Connectors

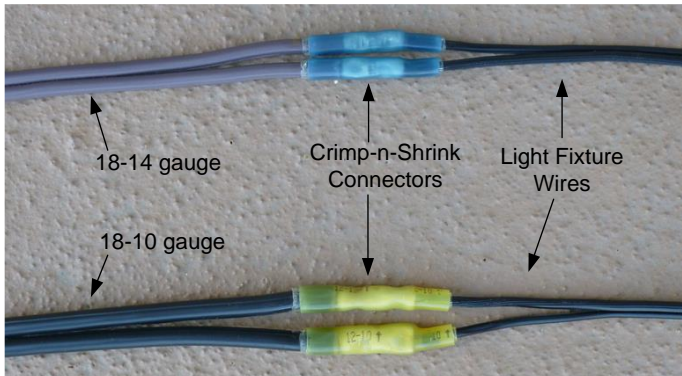

SPLICE KITS FOR EXTENDING LIGHT FIXTURE WIRES

FEATURES:

- Ideal for extending the 18-gauge leads of Low Voltage Landscape Light fixtures.
- The splice is virtually invisible for connections on light fixtures installed in trees.
- This is a crimp-type connector where the insulation is made from shrink tubing. Just squeeze it using a TH-440 crimping tool and heat it with a match, a cigarette lighter, or a mini torch.
- The adhesive in the inner wall of the shrink tubing melts and creates a water resistant splice.

■ Typical installation:

- Installation tips: The MH14BCX and MH10BCX can be used on 18 and 16 gauge wire provided they are double-crimped with the TH-440 tool. First crimp the connector using the color-coded jaw of the tool and then re-crimp using the blue/red colored jaws.

■ Packaging details:

Model	Color	Wire Size (AWG)	Qty. per case
270MH14BCX	Blue	18 - 14	100 (4 bags of 25)
270MH10BCX	Yellow	18 - 10	
270051	TH-440 Crimping Tool		10
